ENERGY RECOVERY SYSTEMS

For Model L™, Enlight and Xion Rooftop Units | 60Hz

COMMERCIAL PRODUCT SPECIFICATIONS (EHB)

300 to 6200 cfm Capacity

For Rooftop Units equipped with the Lennox® CORE or CORE LITE Unit Controller

MODEL NUMBER IDENTIFICATION

50 R 06 49 X H 23 (Factory Options) (See codes below)

- **Manufacturer Code**
  - 50 = Lennox
- **Wheel Design**
  - R = Fixed
  - P = Pivoting
- **Air Flow Range**
  - 06 = 300-550 cfm
  - 11 = 700-1000 cfm
  - 20 = 1000-1700 cfm
  - 28 = 1500-2800 cfm
  - 36 = 2800-3600 cfm
  - 46 = 3400-4600 cfm
  - 62 = 4800-6200 cfm
- **Matching Lennox Models**
  - 49 = 024-074
  - 51 = 078-152
  - 52 = 156-300
  - 53 = 302-360
- **Design Series**
  - X = First Generation
- **Blower Speed**
  - H = High
  - M = Medium
- **Voltage**
  - 21 = 208/230V - 1 phase - 60Hz
  - 23 = 208/230V - 3 phase - 60Hz
  - 33 = 460V - 3 phase - 60Hz
  - 43 = 575V - 3 phase - 60Hz

Factory Option Codes **L M E S P R D V F F E**

- L = Low Ambient Kit
- M = Motorized Outside Air Damper
- E = Motorized Exhaust Air Damper
- S = Stop-Start-Jog (Only On Fixed Wheel)
- P = Pressure Sensor
- R = Rotation Sensor
- D = Disconnect
- **VFD Available Options**
  - V = Non PID - Intake & Exhaust Blowers
  - T = Non PID - Wheel Only
  - B = Non PID - Both Blowers & Wheel
  - U = PID - Intake & Exhaust
  - Y = PID - Wheel Only
  - Z = PID - Both Blowers & Wheel
- **Dirty Filter Sensor Location**
  - F = Fresh Air Intake
  - E = Exhaust Air
  - A = Fresh & Exhaust Air (Not Used With "M" Option)
- **Filter Rack**
  - F = Fresh Air Intake
  - E = Exhaust Air
  - A = Fresh & Exhaust Air (Not Used With "M" Option)
- **Wheel Type**
  - E = Enthalpy
  - S = Sensible

NOTES:

x = Factory Option Not Selected e.g. 50R0649xH23LxESxR

ERS is a Fixed wheel with 300-550 CFM for the 036-060 Unit with a Low Ambient Kit, Motorized Exhaust Air Damper, Stop-Start Jog, Rotation Sensor, Disconnect, VFD - Non PID, Dirty Filter Sensor in Exhaust Air and an Enthalpy Wheel.

APPROVALS AND WARRANTY

APPROVALS

- Rated in accordance with AHRI standard 1060-2023
- To obtain a copy of the Standard or to view Lennox' latest certified data, please visit the AHRI web site at http://www.ahrinet.org
- ETL Certified per UL 1995 and CSA/CAN C22.2 No. 236

WARRANTY

- Recovery Wheel - limited warranty for five years
- All other covered components - one year limited warranty

FEATURES AND BENEFITS

APPLICATIONS

The Lennox Energy Recovery System (ERS) is a constant volume, energy recovery ventilator that is directly coupled with Lennox rooftop units equipped with the Lennox CORE or CORE Lite Unit Controller rooftop units. Its primary function is to increase overall HVAC system efficiency and to reduce long-term energy costs.

This is accomplished by capturing both sensible and latent energy from either the exhaust or intake air stream and transferring it to the other, resulting in reduced cooling loads at design temperatures up to four tons per 1000 cfm of outside air and reduced heating loads up to 12,000 Btuh per 400 cfm of outside air.

The recovery wheel provides sensible and latent energy exchange between the entering and exhaust air streams of a building allowing a substantial amount of the energy, which is normally lost in the exhaust air stream, to be returned into the entering air.

Each unit factory test operated to ensure proper operation.

OPERATION

- The enthalpy wheel contains parallel layers of a polymeric material that is physically embedded with a silica gel (desiccant)
- The wheel is located in the intake and exhaust air streams of the ventilation equipment
- As the wheel rotates through each air stream, the wheel surface captures sensible and latent energy
- In the heating mode, the wheel rotates to provide a constant transfer of heat from the exhaust air stream to the colder intake air stream
- During the cooling season, the process is reversed
- When used in conjunction with a rooftop unit equipped with an economizer, on pivoting models, the wheel pivots out of the air stream to allow the economizer to operate normally for "free cooling" when outdoor temperature and humidity is acceptable
- By pivoting the wheel out of the air stream, the system can utilize 100% of the rooftop unit's blower capabilities
- During economizer operation, the exhaust blower continues to run, providing power exhaust for the system
- The intake blower is de-energized during economizer operation

ERS SELECTION

- Step One - Determine the air conditioning load requirements using the required amount of outside air without an ERS
- Step Two - Select the proper ERS for the outside air requirements and calculate the tonnage reduction.
- Select the rooftop unit required by reducing the load determined in step one by the reduction in step two
- Example: If the load in Step 1 was 10 tons, and the reduction in Step 2 was 2.5 tons, select a 7.5 ton unit.
- Select the proper ERS based on the selected unit

NOTE - The height of the roof top unit curb MUST correspond with the required curb height needed for the ERS. See Specifications Table.

SYSTEM FEATURES

- Low-voltage logic board used to control frost protection and motorized outside air damper
- Low-voltage terminal strip
- Barometric relief dampers provided standard on all ERS units
- Balancing dampers provided standard on all fixed wheel ERS units
- Metal-mesh, mist-eliminator-type filters provided in intake air hood
- Separate, fused power supply
- Continuous operation down to 10°F without defrost at indoor relative humidity up to 40%
- For temperatures below 10°F an optional, factory installed Low Ambient Control Kit is required

FEATURES AND BENEFITS

RECOVERY WHEEL

AirXchange™ Enthalpy Wheels
- Capable of both sensible and latent heat recovery
- Dry energy transfer
- Moisture in supply air stream is transferred to exhaust air stream in vapor state, eliminating condensate plumbing in the ventilator
- Constructed of lightweight polymer material and coated with a desiccant silica gel that will not dissolve or liquefy in the presence of water or high humidity
- Wheels 25 in. (635 mm)and larger in diameter are segmented for easy removal. Wheels less than 25 in. (635 mm) diameter are removed from cabinet in a slide-out cassette
- Patented, pivoting-wheel option allows unit to operate in true economizer mode when the outside temperature is suitable for cooling
- Pivoting the wheel out of the air stream during economizer mode allows efficiencies to be maximized by reducing demand on the supply fan motor

BLOWERS

- Centrifugal, forward curved blowers provided for high-static capability and low sound levels
- Belt-drive blowers have permanently lubricated ball bearings, overload protection, and adjustable sheaves for blower speed adjustment

CABINET

- Fully insulated with non-hygroscopic fiberglass insulation. Constructed of galvanized steel and finished with electro-statically bonded powdered enamel coating to withstand 1000 hour salt-spray test per ASTM B117
- Attaches directly to the rooftop unit
- All mounting hardware is provided
- Adjustable support legs are provided

Options / Accessories

Factory Installed

Low Ambient Control Kit
- Prevents frost formation on energy wheel heat transfer surfaces by terminating the intake blower operation when discharge air temperature falls below a field-selectable temperature setting
- Intake blower operation resumes after temperature rises above the adjustable temperature differential. Kit includes temperature sensor

Motorized Outside Air Damper
- Damper mounts behind the outside air intake hood and opens when the ERS is energized and closes when de-energized

Motorized Exhaust Air Damper
- Damper mounts in the barometric relief hood and opens when the ERS is energized and closes when de-energized

Stop-Start-Jog (Fixed Models Only)
- Control option that allows intermittent operation of the enthalpy wheel during mild outdoor conditions to provide cycling and cleaning of the wheel

Pressure Sensor
- Measures the amount of outside airflow across the enthalpy wheel

Rotation Sensor
- Verifies the rotation of the enthalpy wheel

Disconnect
- Optional field device used to provide easy ability to switching the power on and off to the ERS
- Must be field wired

VFD Blower Control
- Variable frequency drives are available to control the speed of the blowers only
- These VFD's can be integrated with a building automation system to deliver precisely the amount of air needed to maximize efficiencies

Dirty Filter Sensor
- The dirty filter sensor sends a signal to field wired alarm when filters need to be cleaned or changed

Filter Rack
- Filter racks filter air in both the intake and exhaust sections of ERS

Energy Recovery Wheel - Sensible Type
- Sensible Wheel type is used for sensible heat recovery

Field Installed

ERS Support
- 8 inch high base for support of the exhaust and intake end of the ERS
- Available in 48, 60, 76 inch lengths
- See Page 15 for model numbers

ERS Roof Curb
- Used to support RTU and raise them to the correct height for mounting
- See Page 15 for model numbers

GFI Service Outlet
- Optional field powered service outlet provides power for service equipment
- Must be field installed and wired
- See Page 15 for model numbers

NOTE - Contact your local Lennox Commercial Sales Representative for ordering information.

GUIDE SPECIFICATIONS

Prepared for the guidance of architects, consulting engineers and mechanical contractors.

General

- Unit shall be a constant volume, energy recovery system used in conjunction with packaged rooftop equipment
- Unit shall be directly coupled to the rooftop packaged unit to form a unitized system
- Unit shall be performance rated in accordance with AHRI standards and in compliance with ASHRAE or DOE standards
- Unit shall be certified to the applicable safety standards for the installed country
- In addition, manufacturer shall test operate system at the factory before shipment

Approval

- All models shall be certified in accordance with AHRI Standard 1060-2023, Air-to-Air Energy Recovery Ventilation Equipment and Standard for Safety for Heating and Cooling Equipment ANSI/UL1995, CAN CSA - 22.2 No. 236-05

Equipment Warranty

- Energy Recovery wheel shall have a limited warranty for five years
- All other covered components have a limited warranty for one year

Cabinet

- Shall be designed to attach directly to the rooftop unit.
- Shall be constructed of G90 galvanized steel with a powdered enamel paint finish electro-statically bonded to the metal
- Metal shall be salt spray tested for 1000 hours per ASTM B-117
- Cabinet panels shall be fully insulated with non-hygroscopic fiberglass insulation. Insulation shall have an R-Value of 3.7 and shall be flame resistant per UL-723. Insulation shall be in accordance with NFPA 90A and tested to meet UL 181 erosion requirements
- Full perimeter base rail with top mounted rigging holes and fork truck access from three sides shall be provided
- Test ports shall be provided so airflow can be measured across the energy recovery wheel

Energy Recovery Wheel Types

- Wheel shall be either of the enthalpy type for both sensible and latent heat recovery or the sensible type for sensible heat recovery
- Energy transfer ratings shall be certified in accordance with AHRI Standard 1060-2023.
- Wheel shall be constructed of a lightweight polymer material
- Enthalpy type shall be coated with a desiccant silica gel that will not dissolve or liquefy in the presence of water or high humidity
- All energy recovery wheels shall be designed to be removed from the unit for ease of inspection and maintenance, 25 inch and larger wheels shall be segmented for easy removal
- The wheel shall be easily cleanable with standard coil cleaning solution
- The wheel shall be available in both fixed and pivoting configurations

Performance

- The complete line of units shall have a cfm range of 300 to 6200
- Individual units shall be available in ranges of 300 550, 700-1000, 1000-1700, 1500-2200, 2200-2800, 2800-3600, 3400-4600, 4800-5600, and 5500-6200 cfm
- Unit shall operate to 10°F without the need for frost protection
- Unit shall have up to 73% net effectiveness per AHRI tests. Application effectiveness shall be higher

Control Operation

- Operation shall be controlled by a low voltage logic board
- Logic board shall control low ambient kit and motorized outside air damper

Access Doors

- All components shall be accessible through removable access doors as a standard option

Filters

- All unit shall be provided with mist eliminator type filters in the intake air hood
- Optional internal MERV 8 pleated filters provided with filter racks

Blowers

- Intake/exhaust air blowers shall be direct drive on ERS of 1000 cfm or less
- Belt drive intake/exhaust air blowers shall be used on ERS over 1000 cfm

GUIDE SPECIFICATIONS

Motors
- Blower motors on belt drive ERS shall have permanently lubricated ball bearings. Motors shall have thermal overload protection and shall have adjustable sheaves for blower speed adjustment.
- Blower motors on direct drive ERS shall be PSC type with multiple speeds.
- Intake and exhaust motors shall be individually controlled.
- Motor efficiency shall meet requirements of U.S. Energy Policy Act of 1992 (EPACT).

Electrical
- Units shall have single power point connection.
- A low voltage terminal strip shall be available.

Balancing Dampers
- Shall be provided for all fixed wheel units and shall be mounted inside the rooftop unit.

Barometric Relief Dampers
- Pressure operated dampers shall be provided for all ERS units.

Options / Accessories

Low Ambient Kit
- Low Ambient Kit shall be factory installed to prevent frost formation on the energy recovery wheel.
- Frost is prevented controlling the intake blower operation when discharge temperature is below a selectable temperature setting.

Motorized Outside Air Damper Assembly with Hood
- Shall be factory installed to provide motorized operation of intake air requirements.
- Damper assembly shall be installed behind the ERS outside air intake hood.

Motorized Exhaust Air Damper
- Shall be factory installed to provide motorized operation of exhaust air requirements.
- Damper assembly shall be install in the ERS barometric relief hood.

Stop-Start-Jog
- Shall be a factory installed option for fixed wheel units only. Matching rooftop unit should not have an economizer.

Pressure Sensor
- Shall be a factory installed option to provide the amount of outside airflow across the enthalpy wheel.

Rotation Sensor
- Shall be a factory installed option to verifies the rotation of the enthalpy wheel.

Disconnect
- Shall be factory installed and field wired to provide easy ability to turn power on/off to the ERS

VFD
- Shall be factory installed to provide variable frequency drive to control the speed of the blowers only.

Dirty Filter Sensor
- Shall be factory installed to provide a sensor to signal a field installed alarm when the filters need to be cleaned or changed.

Filter Rack
- Shall be factory installed with 2” MERV 8 pleated filters to filter air in both the intake and exhaust sections of the ERS.

Optional Energy Recovery Wheel
- Optional wheel shall be the sensible type for sensible heat recovery.
- Energy transfer ratings shall be certified in accordance with AHRI Standard 1060-2023.
- Wheel shall be constructed of a lightweight polymer material.
- All energy recovery wheels shall be designed to be removed from the unit for ease of inspection and maintenance, 25 inch (635 mm) and larger wheels shall be segmented for easy removal.
- The wheel shall be easily cleanable with standard coil cleaning solution.
- The wheel shall be available in both fixed and pivoting configurations.

GFI Service Outlet
- Shall be field installed and field wired to provide powered service outlet.

ERS Equipment Support
- Shall be field installed to provide support of the exhaust and intake end of the ERS.
- Supports are available in 48, 60, and 76 inch (1219, 1524 and 1930 mm) lengths.

ERS Roof Curb
- Shall be field installed to provide support of the RTU and raise them to the correct height for mounting.
